

msre design

aslak stubsgaard

1 introduction

the design and dimensions of the molten salt reactor experiment is detailed in several reports. this document aims at providing a comprehensive overview of the core design dimensions and materials, for the purpose of creating an accurate cad model of the reactor. care is taken to give proper references to where data comes from or how its extrapolated from the available information.

2 core design

the msre core design can be seen in figure 1 and figure 2, note that they differ slightly, e.g. the vessel drain line and around the control rod.

figure 1: MSRE reactor vessel (kedl 1970, figure 1).

figure 2: cutaway drawing of IGRE core and core vessel (engel and haubenreich 1962, figure 1).

2.1 control rod and sample assembly

the control rod and sample assembly is further detailed in figure 3.

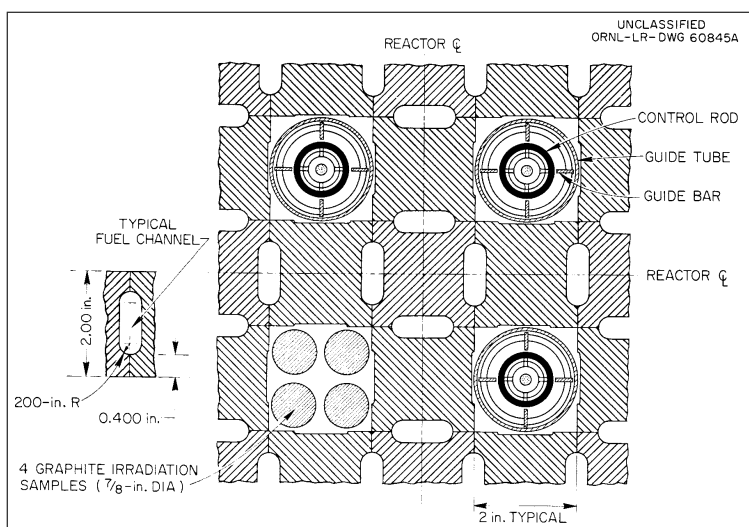

figure 3: msre control rod arrangements and typical fuel channels (engel and haubenreich 1962, figure 2).

3 graphite rods

the graphite moderator rod dimension, given in figure 4, are missing the angle of the spike, the dimensions of the pole, and disk at the bottom.

figure 4: typical graphite core block arrangement (kedl 1970, figure 2).

the arrangement of the graphite rods are detailed in figure 5

figure 5: reactor core block assembly plan, drawing D-BB-B-40416 (mccoys and mcnabb 1972 page 10-11)
